

Lloyd's Lab Cohort 15 - Pitch Day Companies

On **Tuesday 9 September**, 22 innovative companies will pitch their solutions to the Lloyd's market, competing for a place in Cohort 15 of the Lloyd's Lab accelerator programme.

These companies were shortlisted from over **250 applications**, with **150 completed submissions** and 40 reviewed by the Lloyd's Lab Market Working Group. The following teams have been invited to Pitch Day, where market participants will vote on which solutions they want to see in the Lab.

Please note: Inclusion in this list does not indicate acceptance into the programme. These companies are pitching for a place.

ATG (Ashes to Gold) is an environmental services company specialising in land restoration and PFAS (Per- and Poly-Fluoroalkyl Substances) remediation. With the UK's most comprehensive 'Forever Chemical' database, we're developing scalable solutions to support insurers in managing environmental risk and improving contaminated land outcomes.

Lloyd's Lab Cohort 15 - Pitch Day Companies

Catbird is an AI-driven platform for specialty insurance claims. It unlocks buried data, accelerates workflows, and empowers insurance experts with actionable insights to make faster, smarter decisions with confidence.

<https://www.hicatbird.com/>

Creation Rights enables creators to track, control, and monetise content across platforms using patented metadata technology. Its platform ensures accurate ownership, automates royalty payments, and provides AI-powered transparency, helping creators and enterprises manage rights and reduce unlicensed content use.

<https://creationrights.com/>

Powered by **Cyber-Logica MGA**, Torus transforms cyber risk management by combining real-time telemetry and FAIR-based modelling to quantify exposure. Its platform enables tailored insurance solutions, supports proactive underwriting, and helps organisations of all sizes to secure coverage and build resilience through data-driven insights.

<https://torus.security/>

Ecliptic Technology builds collaborative platforms for the insurance market, streamlining delegated authority and claims. Its tools simplify contract lifecycles, and automate premium, claims and risk validation and reconciliation, replacing manual processes with integrated, real-time workflows across market stakeholders.

<https://www.ecliptic.tech/>

Fluence World is a decision support tool for specialty insurers, using forensic linguistics and machine learning to uncover loss indicators in submission narratives. It enables faster, more consistent underwriting by revealing language patterns linked to loss or profitability.

<https://www.fluence.world/>

GenAirate Technologies helps MGAs, syndicates, and insurers process broker submissions faster and more accurately by extracting and enhancing data from unstructured documents. Its AI-powered platform supports better underwriting decisions and gives underwriters more time to evaluate risk.

Lloyd's Lab Cohort 15 - Pitch Day Companies

Hepha is the first insurance solution for manufacturing processes, using AI to analyse production files and QA data. It converts operational risks into tradable, insurable assets, enabling manufacturers to reduce uncertainty, lower safety buffers, and secure coverage for short-run and prototype production—segments often excluded from traditional insurance.

<https://www.hephainsurance.com/>

Hexa is redefining governance in the insurance market. The AI-native platform unites processes, risks and data across functions so operational changes flow seamlessly through Claims, Finance and Reporting, increasing resilience and agility while preventing costly compliance failures.

<https://www.wehexa.com/>

InfraSure is a purpose-built platform delivering high-resolution climate risk analytics for infrastructure assets. Combining physics-based models and AI, InfraSure provides asset-specific forecasts and peril insights to help investors, lenders, insurers, brokers and owners measure, monitor, mitigate and adapt in order to implement climate-smart risk management across weather-exposed energy and infrastructure projects.

<https://www.infrasure.ai/>

ISARR is redefining risk management with AI-powered platforms that analyse over 2M+ global security events. From insurance portals to BoydAI and risk-data.ai, ISARR equips organisations to anticipate disruption, enhance resilience, and make smarter, data-led decisions.

<https://isarr.com/>

KorrAI Technologies is a geospatial AI company helping insurers and infrastructure owners automate site due diligence. Its TRAIL platform combines satellite imagery and document intelligence to assess land stability, site history, and environmental risks, streamlining underwriting and reducing manual investigations.

<https://www.korrai.com/>

Pemberton is a female-founded environmental tech company delivering scalable biodiversity monitoring and verification. Using AI, remote sensing, and automated data processing, its platform replaces manual workflows to support trusted, transparent reporting for Biodiversity Net Gain and carbon credit markets.

<https://www.pemberton.ai/>

Pinepeak predicts wildfire risk and behaviour using physics-based algorithms and geospatial AI. It delivers hyper-local forecasts and real-time intelligence, helping insurers assess exposure, price coverage confidently, and manage portfolios more effectively across the evolving global built environment.

Lloyd's Lab Cohort 15 - Pitch Day Companies

RecordLinker is an ML-powered platform for data conversion and cross-system entity resolution. It enables easy data standardisation, transformations, and generation of system-specific data formats required as payload. RecordLinker integrates via APIs with core systems while providing data quality checks, powerful data admin interfaces, and workflows for key entities as well as related day-to-day data maintenance tasks.

<https://recordlinker.com/>

SanctionsIQ is a Lloyd's market-native solution tackling the complex Marine Cargo and specialty referrals that current sanctions tools can't handle high-risk geographies, sensitive cargo, and nuanced scenarios beyond sanctioned persons list lookups. It delivers the precision and efficiency the market needs to make compliance both robust and speedy, and crucially, it advises how to proceed — it won't just say no.

<https://sanctionsiq.com/>

Sunereum Labs is building an AI-powered insurance and reinsurance platform for energy infrastructure. It combines digital underwriting, smart contract claims, and parametric pricing to cover solar assets and support climate resilience, serving asset owners, developers, and financiers globally.

<https://sunereum.com/>

Sustema is a behavioural analytics company helping commercial insurers improve underwriting by assessing client management behaviour. Its platform, BASE, supports better selection and portfolio design, with AI-powered tools for entity matching and emerging CO₂ emissions and regulatory needs.

<https://sustema.io/>

Valuables is the market standard for quantifying key person brand risk. Its platform delivers live, auditable valuations of executive and founder brands, integrating into diligence and underwriting workflows to support governance, pricing, and capital protection across major corporate transactions.
