

Delegated Contract Manager – R1.1

What is coming and what does it mean for you?

Functionality	Change impact	Benefit	When
<ol style="list-style-type: none"> 1. Mid Term Broker Change 2. Validation error message enhancements 3. DCOM/ DDM Integration (Minimum Viable Product) 	<ol style="list-style-type: none"> 1. Ability to change the Broker associated to an active contract 2. Ability to identify and enable the user to navigate to errors (e.g. data missing from mandatory fields) quickly 3. Following signing of contract within DCOM, the core data will flow through and populate contract fields within DDM removing the current rekeying 	<ol style="list-style-type: none"> 1. Only one registration per contract regardless of how many MTBC's have been performed, a clear historic view of the contract for all participants, no need to endorse the paper contract, the ability to transfer multiple records at one time if linked by renewal. 2. More efficient error messages navigation in DCOM to enhance / speed up process (e.g. hyperlinks) 3. Improve data accuracy, time saving due to reduction in re-keying (no duplicate date entry), reduces effort to input contract data into Delegated Data Manager. 	<p>R1.1 (mid October)</p> <p><u>Please note:</u> the integration with DDM will be available 5 November (i.e. the data will not flow through until then), subject to successful Market Acceptance Testing.</p>
