Cohort 10 Pitch Day Teams

Aanika Biosciences, Inc. is a biotechnology company dedicated to developing food safety technologies. Aanika has created a multi trigger parametric food recall policy designed to embed with its microbial barcode tags and provide coverage against financial loss resulting from a food pathogen event.

Armilla AI is a leading provider of Responsible AI technology, empowering vendors and enterprises to guarantee the quality of their AI products and mitigate associated risks. Their automated testing platform measures the underlying risk of a model, which lets them insure AI and bring new products to market.

Axio is a cyber risk assessment and quantification focused company which encompasses consultancy, professional services, and SaaS solution provider.

Coinnect is a Cyber Insurtech Company providing Intelligence Data and innovative solutions for Cyber Risk Assessment, Mitigation and Response. Their Cloud Platforms and APIs are built for Insurers and make Cyber Insurance a more profitable Business.

Cyberwrite's data-driven solutions, powered by patented AI technology, enable you to sell, underwrite and manage cyber insurance policies with greater confidence, efficiency and profitability.

Diesta is a next-generation payment reconciliation engine for the insurance industry. Their technology links internal systems and external partners onto one financial ledger for an efficient and fast processing of insurance premiums.

FireBreak is filling both the data and protection gaps in wildfire risk. Their mobile app for self-inspection encourages mitigation while generating first-party, on-the-ground data for underwriting. They aim to make new coverage options available, including parametric, using differentiated property-level risk data.

FloraTrace provides material origin science along with Rezylient - forced labor supply chain disruption insurance. Their two products provide risk transfer and risk management to assist companies in their compliance and ESG efforts to help eradicate global forced labor in supply chains.

Gabriel is a next-generation active threat solution that dramatically reduces the risk of an incident costing unnecessary lives and damage. By taking a preventative approach, leveraging cutting-edge technology, and easy-to-use solutions, Gabriel has been proven to save lives when seconds make all the difference in the world.

HSB Solomon provides data-driven, strategic insight across the energy industry. They have developed a standardized life cycle methodology of estimating carbon dioxide emissions for over 98% of worldwide oil and gas producing assets.

Intelligent AI brings together deep insurance domain expertise, together with innovation and data science to transform the commercial property underwriting sector globally with Digital Twins of Risk. Their Intelligent Risk Underwriting delivers 360 degree view of risk across 100% of global commercial property portfolios.

Loadstar provides an innovative parametric insurance solution that solves an importer's challenge of unpredictable shipping container inspection costs while entering US Ocean Ports. Their insurance program provides swift reimbursement for affected importers within 24-48 hours.

PolArctic is an oceanographic, and data science company with a focus on creating tailored products for the Arctic. They are identifying and creating solutions to business and policy questions about the Arctic through the use of Artificial Intelligence (AI) and Machine Learning (ML) techniques.

REOR20 develops a breakthrough AI system for flood risk understanding and mitigation based on the physics governing floods. The solution combines accuracy with unprecedented scaling capabilities, providing high resolution hazard data down to the individual building element.

Signal Intelligence work with maritime organisations who want to increase operational efficiency and be more environmentally responsible; they harness the power of IoT to unlock siloed vessel performance data and deliver value to their partners.

Simulytic, A Siemens AG Venture, provides (re-)insurers risk exposure insights for automated vehicle (AV) deployments. The Simulytic platform contextualizes an AV deployment with digital replicas & models, simulates a rich synthetic driving history using their proven tech and analyses the operational lifetime of AVs to support pricing a policy and scenario-based insurance products.

spacebands create software and wearable technology that makes workplaces safer.

ThinkTank Maths offers a DeepTech App with more accurate and trustable Surveillance and Tracking capability of satellite, helping Government and commercial satellite operators to reduce risk and avoid collisions.

Value.Space delivers satellite-based risk assessments, it has opened-up a new and proven capability that provides a x10 faster and x25 more cost-efficient way to assess risks of assets such as dams, mines, tailings storage facilities and real-estate. With the collision of climate change and aging infrastructure, asset risk levels are on the increase. Value.Space helps insurers identify and de-risk these global problems at once.

WRMS is a climate & agriculture risk management company that has created SecuRISK, a full-stack digital-first parametric insurance platform that enables insurers and reinsurers to design, validate, price, and deliver a range of parametric insurance.
