

Cohort 11 Pitch Day Teams

cinnamon AI

[Cinnamon AI](#), have a 'tailored ChatGPT' solution backed by multiple large language models (LLM)s, which can fully transform both structured and unstructured data into actionable insights to create a dedicated knowledge base for insurance companies.

[CLIMATIG](#) is climate insurtech SaaS application which helps insurers and banks to identify, measure, and act against eight climate change physical risks for any asset in the World in resolution of 10 meters, until the year 2100.

[Cyntegra's](#) patented Recovery Operating System (CyntOS®) enables organizations to avoid the potentially catastrophic disruption and associated costs of ransomware and disruptive malware attacks by enabling end users to fully restore a compromised system to its familiar and functional pre-attack state in minutes.

CYSTELLAR

[Cystellar](#) as a downstream SpaceTech geospatial intelligence company, develops products and services which are adapted from technology that was originally made for use in space and extensively uses data generated by satellites for applications on Earth.

Femat

[FERMAT CO. LTD](#) is an innovative aquacultural technology company with the vision of improving aquacultural efficiency and sustainability and the initial team of the company is a joint group of acoustic researchers, aquacultural experts and insurance actuaries.

FLOODBASE

[Floodbase](#) is an end-to-end data solution monitoring global flood risk for insurers and government agencies. Floodbase integrates satellite observations and hydrological data to provide both historical and near real-time flood data.

[Loro](#) Insurtech has been disrupting the insurance industry. With Loro's platform, insurers or MGAs can quickly create, customize, and deploy specialty insurance products without any upfront investment. Additionally, Loro's solution is completely free for the first \$100,000 GWP every year, providing unmatched accessibility and affordability.

CONNECTING TECHNOLOGY WITH INTELLIGENCE

[Matrix iQ](#) is a data aggregator working with connected vehicle manufacturers and aftermarket telematics service providers to deliver normalised risk and behavioural insights. They tackle multiple barriers faced by commercial motor insurers, enabling them to utilise telematics data to reduce claims exposure and develop usage based products.

[MetaRisk](#) is an innovative risk financing firm specializing in digital assets and Web3, bridging the gap between Web3 and insurance while leveraging blockchain technology to enhance operational efficiency, financial openness, and inclusivity.

Mitigate

[Mitigate](#) focuses on climate adaptation and loss prevention in property insurance. The SaaS platform performs fully automated analyses for a given geographical location, generating recommended preventive and protective measures against flood damages to help sales agents, claim handlers, and appraisers minimise future claims and maximise customer loyalty.

[One Concern](#) is a technology company building the digital infrastructure for global physical risk. They map, analyze and monitor every piece of the world's built environment and its connection to the global economy. Their mission is to make disasters less disastrous.

[Phare Labs](#) uses a patent-pending combination of advanced sensors and AI to quantify fire risk with unmatched granularity. Phare spots fires earlier and more accurately to limit losses, and generates new data that enables insurers to make more informed underwriting decisions.

[Protos Labs](#), a Singapore-based insurtech, addresses the high costs of cyber premiums through advanced risk analytics. Their proprietary model considers 360-degree data points, creating comprehensive cyber risk assessments that sets them apart from typical approaches and contributes to a safer and secure Asia.

[RedZone](#) is on a mission to minimize the impact of wildfire. By providing best-in-class wildfire intelligence and services, they work with their customers to save properties and, more importantly, save lives.

[Renew Risk](#) provides risk modelling software for renewable energy assets. Renew Risk's deep data science-driven risk models enable (re)insurers to undertake comprehensive catastrophe risk assessments, inform pricing and capacity, conduct event response, etc., and confidently underwrite risks in new regions throughout all phases.

[Sensori](#) is a computer vision start-up that bridges the gap between onsite documentation and laser scanning through the use of photogrammetry to create 3D snapshots of construction and infrastructure projects.

[Suyana](#) has partnered with [Benchmark Labs](#) to create a hybrid-parametric flooding & hurricane insurance product. By using machine learning and digital technologies they can make flood insurance more accurate, accessible, and affordable. Their value proposition lies in creating tailor-made products for our customers

[Sync Technologies](#) (SyncTech) is a Service & SaaS solution for capturing and hosting virtual replicas of buildings and delivering AI technology value-added services for the building insurance and construction industries.

[Tensorflight](#) offer property intelligence solutions powered by AI and Deep Learning. For underwriting, risk modeling, and claims. Globally.

[Vayuh](#) is a deep-tech company consisting of engineers and scientists from the UC Berkeley Lab community. Using Physics, Data, and AI we build highly accurate weather forecasts and peril risk models for clients across industries. They are looking to help the insurance industry to adapt to the changing climate by providing actionable insights.

[Wenalyze](#) is a data enrichment solution for the SME insurance segment. The Solution collects online data to identify the SMEs industry activity, locations, hidden risks, and delivers it in real time, allowing carriers to reduce data collection times and price policies more accurately.

 WRMS

Farm Smart. Secure Tomorrow.

 ZenHedge

[WRMS](#) is a climate & agriculture risk management company that has pioneered innovative parametric insurance solutions in emerging economies. SecuRISK, by WRMS, is a full-stack parametric insurance platform and marketplace that enables risk carriers to rapidly design and deliver parametric products across the globe.

[ZenHedge](#) is a US-based FinTech company that delivers innovative risk transfer solutions at scale. ZenHedge's parametric insurance program mitigates a substantial uninsured risk in the global supply chain, with an initial focus on freight transportation using motor trucks.
